

Order Entry Module Classes

Module Goal: Parse incoming messages -> validate  
-> Create typed orders -> generate unique ID's  
-> route to correct order book.

OrderParser  
Purpose: Converts raw input (JSON/websocket string) into  
Structured Order objects

OrderFactory  
Purpose: Create Concrete Order Subclasses  
based on type.

OrderRouter  
Purpose: Directs validated orders to the  
Correct Per-Symbol OrderBook

OrderValidator  
Purpose: Ensures order meets business rules before  
before routing.

OrderIDGenerator  
Purpose: Generates unique, Sequential order IDs  
safely across threads.
